PROFESSIONAL SUMMARY

Backend Software Engineer with 2+ years of experience designing and scaling microservices for enterprise SaaS platforms, using Java, Spring Boot, and AWS (S3, SQS). Reduced service latency by 68% and pipeline processing time by 80% through architectural redesign, asynchronous processing, and performance optimization. Experienced in building fault-tolerant, high-availability systems with strong observability practices (Splunk), with a track record of solving complex distributed systems problems under production constraints.

SKILLS

Languages: Java, Python, C++, JavaScript, SQL

Frameworks/Libraries: Spring Boot, Java Collections, C++ STL, NumPy, Pandas

Databases: MySQL (RDBMS)

Backend & System Design: Microservices, Distributed Systems, REST API Design, Asynchronous Processing, AWS (S3, SQS)

Core Concepts: OOP, DBMS, Data Structures, Algorithms, Computer Networks

Developer Tools: Git, GitLab, VS Code, IntelliJ, Postman, Jira, Splunk, Amazon Q, Amazon Kiro

WORK EXPERIENCE

Infor, Hyderabad

Mar 2025 - Present

Associate Software Engineer

- Designed and built a scalable image retrieval microservice using AWS S3, migrating from database-based BLOB storage and reducing average retrieval latency from 22s to 7s, a 68% improvement, while lowering database I/O bottlenecks.
- Engineered end-to-end asynchronous processing using AWS SQS, implementing producer and consumer services to decouple image workflows and improve system scalability and fault tolerance.
- Designed a stateless image-generation REST API with multi-language support, enabling on-demand asset generation for missing objects in S3 and improving downstream reliability.
- Optimized a resource-intensive screenshot generation pipeline, reducing end-to-end processing time by over 80% and eliminating CPU and memory saturation under peak load.
- Developed a centralized auditing framework integrated with Splunk, capturing CRUD operations across microservices to improve observability, traceability, and production debugging efficiency.

Tech Mahindra, Bengaluru

Sept 2024 - Feb 2025

Associate Software Engineer

- Completed structured training in Java, Spring Boot, and microservices architecture, building scalable backend applications aligned with enterprise development standards.
- Built hands-on mini-projects implementing REST APIs, authentication flows, and database integration to strengthen backend development fundamentals.
- Applied Git version control workflows and core system design principles, establishing a strong foundation for production-level software development.

Hewlett Packard Enterprise (HPE), Hyderabad

Mar 2024 - Sept 2024

Software Engineer Intern

- Engineered a high-performance data processing script for a product dashboard, fetching and organizing datasets into Excel with support for 1000000+ entries per sheet.
- Optimized CPU and memory usage by 50%, improving application performance and scalability under large data loads.

PROJECTS

Expense Sharing Application | Java, Spring Boot, Spring Security, Google OAuth 2.0, MySQL

- Developed a group expense-sharing application, reducing manual calculations by 90% through automated tracking and settlements.
- Integrated JWT and Google OAuth 2.0 for secure authentication, ensuring 100% session protection.
- Implemented the Strategy Design Pattern to support multiple splitting methods (Equal, Exact, Percentage), improving scalability and maintainability.

EDUCATION

Jaipur Engineering College & Research Centre

2020 - 2024

Bachelor of Technology (B.Tech), Computer Science & Engineering | GPA: 8.68/10.00

ACHIEVEMENTS

- Received the **Star of the Month** award at Infor (March 2026) for consistently delivering high-quality work. [\[Certificate\]](#)
- Achieved **All India Rank 1692** and **Institute Rank 5** in CodeKaze Coding Ninjas (2023). [\[Certificate\]](#)
- Solved **300+ problems** on LeetCode and GeeksforGeeks, demonstrating strong data structures and algorithms proficiency. [\[LeetCode\]](#) [\[GFG\]](#)
